DETAILED ACTION

1. Claims 1-2 are presented for examination.

Specification

2. The disclosure is objected to because of the following informalities:

(a) Brief Description of the Several Views of the Drawing(s): See MPEP § 608.01(f).

A reference to and brief description of the drawing(s) as set forth in 37 CFR 1.74.

Appropriate correction is required.

Drawings

3. The subject matter of this application admits of illustration by a drawing to facilitate understanding of the invention. Applicant is required to furnish a drawing under 37 CFR 1.81(c). No new matter may be introduced in the required drawing. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). The drawing should include legends for items provided.

Double Patenting

4. Claims 1 and 2 are provisionally rejected under 35 U.S.C. 101 as claiming the same invention as that of claims 1 and 2 of copending Application No. 10/807,418. This is a provisional double patenting rejection since the conflicting claims have not in fact been patented.

Claim Rejections - 35 USC § 102

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

6. Claims 1 and 2 are rejected under 35 U.S.C. 102(b) as being anticipated by Bakhtiari et al. (US Patent No. 5,886,534 and Bakhtiari hereinafter).

7. As to claim 1, Bakhtiari discloses a method of generation and homodyne detection comprising:

selecting a length of electric path, wherein an equal value is selected of both electrical paths between shunt arm in waveguide T-connection and generated diode in one collinear arm, and in the second collinear arm between the same shunt arm and detection diode (Fig. 6; col. 9, lines 37-42).

Art Unit: 2858

8. As to claim 2, Bakhtiari discloses a generation and homodyne detection system having:
a generation Gunn diode seating connected with one collinear arm, and detection diode seating connected with the second collinear arm significant by waveguide T-connection between generation diode seating and detection diode seating (Figs 6 and 7A; Col. 2, lines 43-51 and col. 10, lines 12-24).
